NO UNNECESSARY BIN ENTRIES

WORK SAFE, NOT HARD!

The Daay Power Sweep can be manufactured for bins from 15' up to 66'. It is designed to be fully submersed in grain. The Daay Power Sweep has the ability to perform single or multiple passes. It has a flexible pivot joint and stabilizer arms to allow it to move independently from the gearbox. This allows the sweep to adjust to variations in the floor height. It also has adjustable stabilizer arms to accommodate variations in the bin size and roundness.

The paddle chain moves grain gently and evenly to the sump. The drive is driven by the paddle chain, eliminating the need for another power source. The rubber drag also helps clean the floor for minimal sweeping. The Daay Power Sweep has a capacity of 5000 Bu/hr. at 350 rpm tightener shaft speed.

FEATURES

- Powered by the power gearbox so there is no 2nd motor or power cords.
- Has a single, segmented 5"x8"x15" tire.
- The drive wheel is closer to the center of gravity, so the weight of the sweep is transferred to the tire, better eliminating the need for a weight bracket.
- The flexible pivot joint transfers the power from the gear box to the sweep and gives you the flexibility to slow down or speed up the speed of the paddle chain to better match the bushels per hour of the reclaim system. *This will prevent overloading of the sweep and reclaim due to excessive capacity.*
- The inclined pivot section allows the sweep to work on any system (and still maintain max capacity) that is designed for a power sweep, even on types where the center sump offset from the gearbox.
- Pivot kits are available for both a new install or to retro fit to your existing power sweep reclaim system.
